

Rhizome-bed restoration

Spatial model, public-site update, and source-backed material calculator

The approved rear/right quarter-sector is restored in the 2D, 3D, GLB, and public outputs. Inherited v0.14 object geometry remains fingerprint-identical, and the adopted R4 solar analysis was not rerun.

Rhizome bed geometry

Exact plan footprint; vertical and band dimensions remain display proxies

Identity	Rhizome bed (RZ)
Centre	Rear-right locked corner: (5800, 9000) mm
Plan profile	90 degree inward quarter-sector toward local -X / -Y
Outer radius	1100 mm - user-approved exact plan authority
Display inner radius	1080 mm - derived from the 20 mm display band
Display height	300 mm - reservation-only proxy, not product height
Gross footprint	$0.950332 \text{ m}^2 = \pi \times 1.1^2 / 4$
Display-model net fill	$0.916088 \text{ m}^2 = \pi \times 1.08^2 / 4$

Preservation and fit

- Inherited object fingerprint check: PASS.
- The arc endpoints meet the locked rear and right fence lines and remain inside the 5.8 x 9.0 m site.
- The restored footprint stays within the established rear/right bed and does not overlap the patio access route or adjacent Corten edge.
- Rhizome Corten height, thickness, fabrication, and product choice remain a specific ordering exception.

Established source regions

Areas come from 2D receiver meshes and analytic geometry, never image pixels

Region	Area used	Status	Ordering estimate
Patio concrete	10.250 m2	Measured Footprint / Derived Area	Yes
Central lawn	24.075 m2	Derived From Measured And Approximate Cu...	Yes
Lower-left bed	2.890 m2	Approximate Existing / Derived Area	Yes
Rear/right bed outside rhizome bed	9.784 m2	Measured And Derived Existing / Net Of Appro...	Yes
Rhizome bed	0.916 m2	Plan Exact / Vertical And Band Presentation P...	No - planning only

Calculator formulas

Finished volume m3 = area m2 x depth mm / 1000

Order volume = finished volume x (1 + waste fraction) / (1 - settlement fraction)

Bag count = ceiling(order litres / bag litres)

No solar rerun

R4 receiver results are mapped to the approved footprint for context

Rhizome footprint - winter B330 planning means

BASELINE

0.00 h/day

LIKELY

0.00 h/day

CONSERVATIVE

0.00 h/day

Authority boundaries

Spatial/model release: Garden v0.16 R1 descendant of the protected v0.14 master.

Solar authority: adopted Garden v0.15 R4 scenario-bracketed results, unchanged.

Approximate and measured statuses remain region-specific; the calculator exposes them beside each area.

The public derivative excludes .blend files, raw photos, scripts, logs, local paths, and private records.
